# 1 Introduction

Sparrowhawk FX Video Processing Board includes an expansion connection to support applications which uses High-Definition Multimedia Interface (HDMI) inputs and outputs.

The HDMI Add-on board is a Sparrowhawk FX (SHFX) video processing board daughter card designed to provide additional HDMI inputs and outputs for creating high-bandwidth interface between any audio/video source (video player, game console or A/V receiver) and receiving devices (digital television, various monitors) over a single cable. Additional inputs (4) and outputs (2) are available with following specifications:

- *DDC/EDID supported on all in/out connectors*
- *EDID controlled by IC parts on respective inputs*
- *2160p30 supported on all inputs*

## HDMI In

- *2x HDMI input via SERDES, Equalized*
- *1x HDMI input via ADV7611 24-bit parallel LVCMOS33 interface*
- *1x HDMI input via ADV7619 48-bit parallel LVCMOS33 interface*

## HDMI Out

- *2x HDMI output via SERDES*

## 2 Board features

*Table 1: HDMI Add-on board features*

Category	Features
HDMI	<ul style="list-style-type: none"><li>• <b>4x</b> HDMI input (2x via SERDES, 1x via ADV7611, 1x via ADV7619)</li><li>• <b>2x</b> HDMI output (via SERDES)</li></ul>
Communication Interfaces	<ul style="list-style-type: none"><li>• I<sup>2</sup>C bus</li><li>• SMBus</li></ul>
Board to board interface ports	<ul style="list-style-type: none"><li>• Samtec QTH-060 Header Connector</li><li>• Samtec QTH-030 Header Connector</li></ul>
Power supply	<ul style="list-style-type: none"><li>• Interface header connector dedicated power pins (5 V and 3.3 V)</li><li>• Onboard linear voltage regulator 1.8 V</li></ul>
Manufacturing	<ul style="list-style-type: none"><li>• RoHS compliant</li></ul>

## 2.1 Block schematic

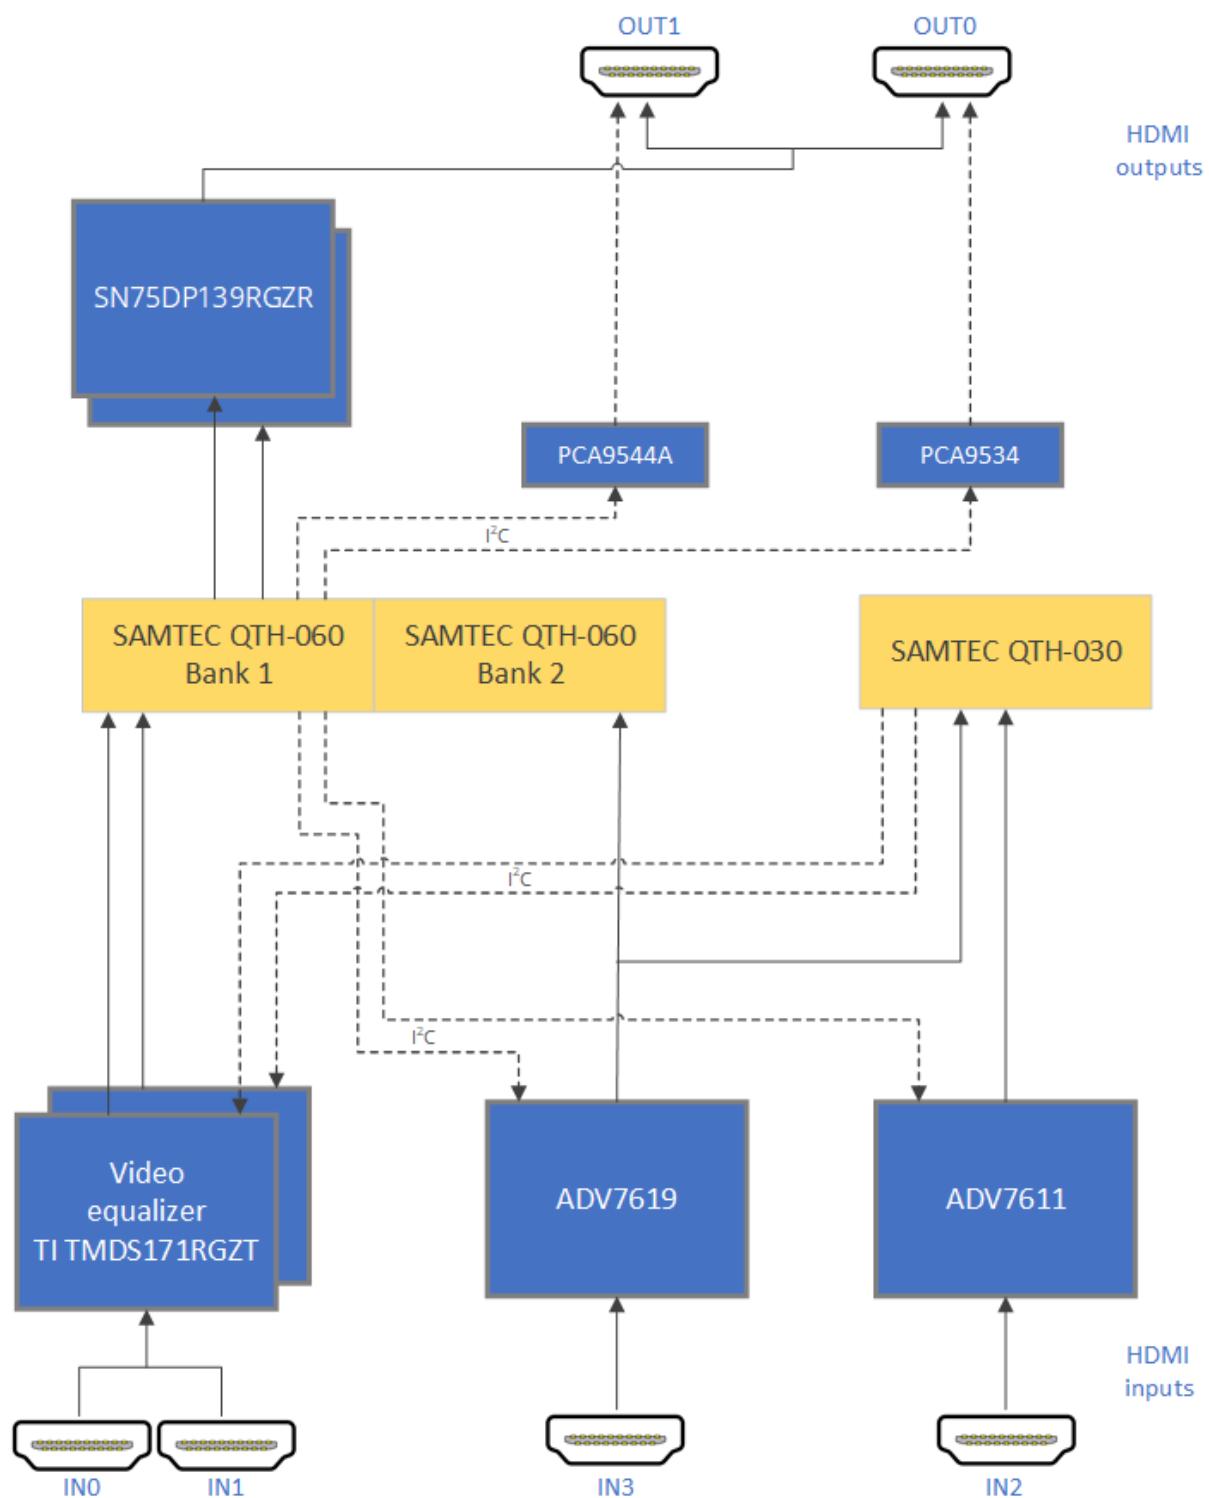

Figure 1: HDMI Add-on board block diagram

## 2.2 Board layout

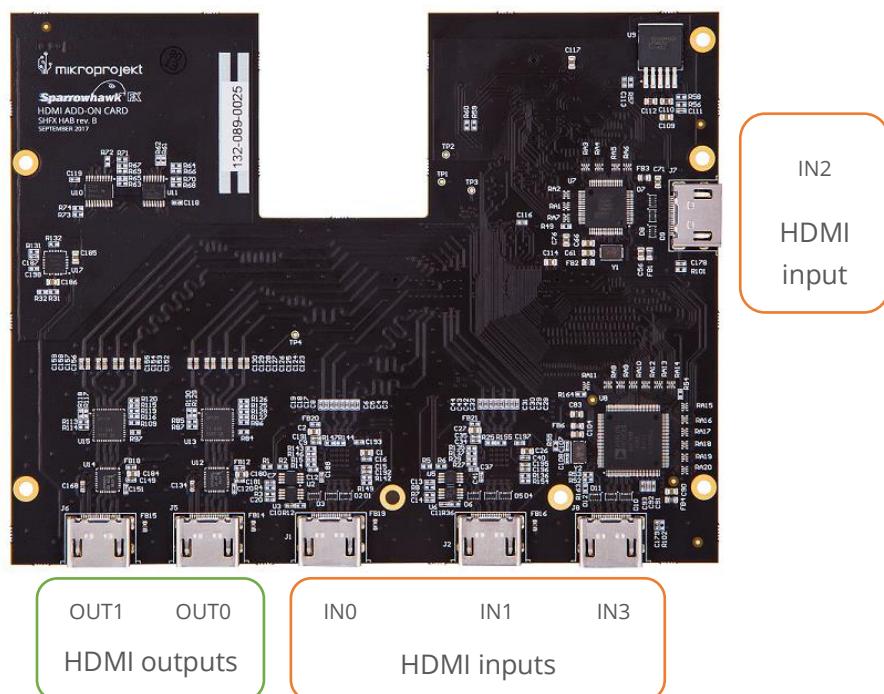

Figure 2: HDMI Add-on board layout – top

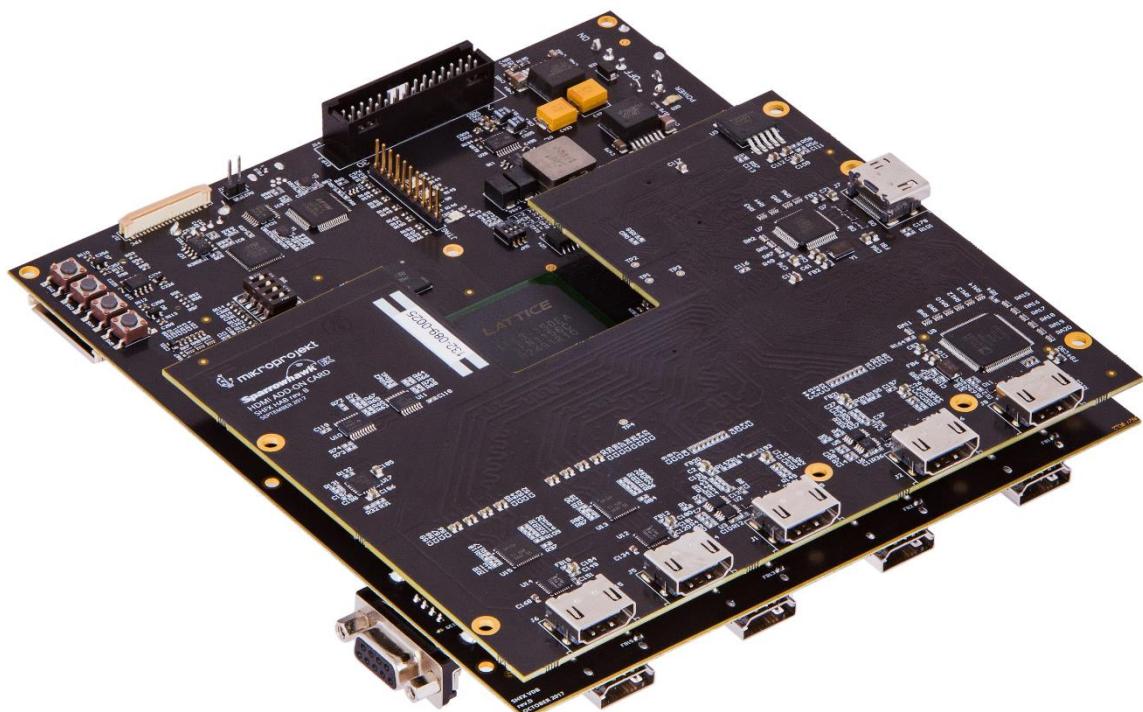

Figure 3: HDMI Add-on assembled on the Sparrowhawk FX

## 3 Powering up the board

### CAUTION!

*The HDMI Add-on PCB is protected against ESD (Electro Static Discharge), but improper handling can still damage the board. Try to avoid touching non-insulated parts of the board, especially DDR3 and the expansion connectors. If possible, use a functioning ground strap whenever handling the board.*

To power up the HDMI Add-on board, it is necessary to plug it into the Sparrowhawk FX board (see Figure 3). The HDMI Add-on board is powered through the interface header connectors dedicated power pins, providing 3.3 V and 5 V to the board.

## 4 PCB details

The HDMI Add-on board uses HDMI connectors for all inputs and outputs. The HDMI channels are connected to the FPGA through the Samtec QTH-060 and QTH-030 header connectors (Expansion Connectors #0 and #1 on the Sparrowhawk FX).

### 4.1 HDMI input

HDMI input is available via 4 HDMI connectors according to table below.

Table 2: HDMI inputs

HDMI input	Connector
IN0	J1
IN1	J2
IN2	J7
IN3	J8

Inputs IN0 and IN1 are bridged between HDMI connectors and Lattice ECP3 150 FPGA on Sparrowhawk FX board through the TI TMDS171RGZT video equalizers. Those video equalizers can be configured using the I2C. The connection to the

FPGA is achieved by using fast differential pairs on the header connector J3 on the add-on board (expansion connector J12 on the SHFX board). These inputs are mapped to Lattice ECP3 SERDES quads A (IN0) and C (IN1) according to the table 3.

The IN2 HDMI input is provided over an ADV7611 HDMI receiver. The connection to the FPGA is achieved using the J3 connector on the add-on board and the J13 connector on the SHFX board. The input is mapped to the ECP3 bank 2.

The IN3 HDMI input is provided over an ADV7619 HDMI receiver. The connection to the FPGA is achieved using connectors J3 and J4 on the add-on board and connectors J12 and J13 on the SHFX board. The input is mapped to ECP3 banks 2 and 3.

Table 3: HDMI input mapping

HDMI input	ECP3
IN0	PCSA SERDES quad
IN1	PCSC SERDES quad
IN2	Bank 2
IN3	Bank 2, bank 3

## 4.2 HDMI output

HDMI output is available via 2 HDMI connectors, J5 and J6, which correspond to labels OUT0 and OUT1 (Table 4). The output connectors are connected to Lattice ECP3 SERDES through SN75DP139RGZR HDMI cable driver and fast differential pairs on the header connector J3. The HDMI output interfaces are mapped to Lattice ECP3 SERDES quads A (OUT0) and C (OUT1). The table below describes mapping between SERDES and HDMI connectors.

Table 4: HDMI output SERDES mapping

HDMI output	Connector	ECP3 SERDES quad
OUT0	J5	PCSA
OUT1	J6	PCSC

## 4.3 I<sup>2</sup>C

The I<sup>2</sup>C bus is used by Analog Devices' HDMI receivers (U7 and U8), Texas Instruments' video equalizers (U1 and U4), NXP's multiplexer PCA9544A (U10) and Texas Instruments' I/O expander PCA9534 (U11).

*Table 5: I<sup>2</sup>C addresses*

Component	Label	HDMI port	8-bit address	R/W
<b>TMDS171RGZT</b>	U1	IN0	0XBA	W
			0xBB	R
<b>TMDS171RGZT</b>	U4	IN1	0XB8	W
			0xB9	R
<b>ADV7611</b>	U7	IN3	0x9A	W
			0x9B	R
<b>ADV7619</b>	U8	IN2	0x98	W
			0x99	R
<b>PCA9544A</b>	U10	OUT1	0xEE	W
			0xEF	R
<b>PCA9534</b>	U11	OUT0	0x46	W
			0x47	R

## 4.4 Interface connectors

Header connector marked J3 is the Samtec QTH-060 high-speed mezzanine connector. It mates with the QSH-060-01-L-D-A connector (expansion connector #0 on SHFX board, marked J12). This board to board interface connector is divided into 2 banks, one dedicated to the high-speed differential pairs, the other to the HDMI pins. Each bank also has power supply pins, one 3.3 V and one 5 V. Two pins are dedicated to the system I<sup>2</sup>C bus.

The connector pinout and the corresponding PCB signal mapping is shown below.

Header connector marked J4 is the Samtec QTH-030 high-speed mezzanine connector. It mates with the QSH-030-01-L-D-A connector (expansion connector #1 on SHFX board, marked J13). The connector is used for HDMI lines along with I2C pins.

The connector pinout and the corresponding PCB signal mapping is shown below.

## 4.5 Test points

The board includes following power voltage and GND test points.

*Table 9: HDMI Add-on board test points*

Test point	Description	Signal
TP1	Ground	GND
TP2	3.3 V power voltage	VCC_3V3
TP3	1.8 V power voltage	VCC_1V8
TP4	5 V power voltage	VCC_5V
